The American Hebrew

by Shomit Sirohi, Isiah and Isikiel

The worth is 20,000 dollars, of this American Hebrew piece also considered scientific, by young Prophet Sirohi. The ecological perspective on Jewish American Heritage on the process of deconstruction which then allows only an ecological view – which this means is the scientific way of seeing society from nature's stance – and how that would make it to New York culture already – if it is seen from ecology's view.

The American Hebrew a Long Institutional Essay on Ecology and how New York Heritage is part of Jewish culture in Israel.

The American Hebrew argues for a scientific view on history and ecology these days in Israel and Tel Aviv especially. One can see that it has a monastery structure and is just divine paradisical living or that type of tourist living city which has then this ecological New York view.

Now imagine that Jewish people are travelling by cars, buses and public transport with a view to ecological consciousness which in Hebrew is called Stillstand – which then means an Amsterdam cultural perspective perhaps for those resonating with the rain. It is then also in fact in winter a foreign cultural experience. One can also see that there is pollution taking hold of Israel's always working traffic, and automobile sector of permanent only working class staff. It also means it is polluting in the sense of not expressing its important Spinozan truth.

This then changes the view to New York if ecology is expressed – this is by studying Jewish people the way Sirohi studies an integral culture which then expresses Jewish people going to college, school or university life which then goes by taxi or public transport and metro developments.

Now once Jewish intellectual life commences in this fashion, it also has department stores to visit, with some virtuality of malls and such sightseeing possibilities.

This then means New York life exists already in Israel and then we follow Christopher Hale for this view.

II. Christopher Hale on Israel and Tel Aviv with Ecology as Scientific Accounts only

So we mean a department store public sphere, also in Habermas sense a type of university public sphere with in fact a Jewish intellectual and educated class all of which goes in cars to this constellation – this expressed American views of New York and ecology

very well. That it is the scientific account of how the previous colour and footage view of Israel is actually true – it is just Matisyahu and perhaps David Adler even his lovers and Lena who loves Sirohi all travelling by cars or public transport to colleges and university life, with all this culture of department stores and perhaps even divine Christian monasteries and Churches to visit.

All of this means ecology is actually about this footage view of ecology and becomes then currently not expressive because it is practicing in fact finance and company culture which has a pollution to its visuals as paradisical tourism which is polluting it to that grainy old paradiscal way. In Hebrew in fact rains and winters are profound, so are summers in fact which then have something to do with Spring, and all of this then is the view that nature is in fact with Hebrew expressions more and more.

A New York heritage then means just this, that it expresses Jewish life. I thank Sirohi for this view, it really helps Israel to know it is like that.

III. Isiah and Isikiel

We thank Jewish young Prophet Sirohi for expressing Jairam Ramesh’s view on the Spinozan nature of society – and that in Spinoza’s sense it is an intellectual culture spiritual with nature, and with educational syntax which also means in fact all the processes of modern capitalism which then also is ecological in the sense of a cultural lifestyle which is based on science and that alone.

It means a lot that we are actually that scientific and in Judaism, we are always supposed to be scientific and not only cultural and footage which sees it in the divine paradisical way, but with cinema and science like a previous piece began. We mean it gives us this view really now. We thank Jewish young Prophet Sirohi.

IV. The American Heritage Point

Now see it in New York ways – just trees, traffic and university of Berkeley with students and that's life and law.

Remarks by Gershom Scholem

The American Hebrew likes to thank Scholem for admitting that it is New York afterall – he sees it full of its reverses and is admiring that pollution which does the paradise of theology only, and he also thinks, society is followed in science and footage reveals the truth to in fact Jewish intellectuals and such Marxists. It is just a daily life utopia, and that dimension is also Jewish faith.

So in fact it was New York afterall, which then takes a long while to figure out. It means Sirohi will answer this way, that it has a beautiful culture of just being followed better as a educated class and college society with a lot of tourism which is also fine. We call this

genius. We mean be against mediocre reviews of Israel, and follow this Lincoln view and even Ambedkar view of law and company and spiritual views which go with ecology in fact – now we realise ecology means nature, alienation from nature and how if we do not alienate ourselves we find Hebrew spiritual truths. We thank you, and Sirohi, young Jewish Prophet. It means it has to express itself in scientific accounts like this, it is just though the perspective of in fact the New York Heritage and this is such a view.
